

Squash the Creeps - Your First 3D Game

LEARNING OBJECTIVES

You build "Squash the Creeps", the official 3D beginner project from the Godot documentation. You learn about **3D physics**, **camera setup**, **physics layers** and **3D animations**, and implement a complete game loop with jump and stomp mechanics.

01 Requirements ◦

Build the game "Squash the Creeps" following the official Godot documentation (see Resources). The player moves in eight directions, can jump and must defeat enemies by stomping on them.

Play Area

Create a play area with a floor, directional lighting and an orthographic camera with a fixed viewing angle.

Player

Create a player scene with eight-directional movement, jumping and gravity. The player dies when an enemy hits them on the ground.

Enemies

Enemies spawn randomly at the edge of the play area and move toward the player. They disappear when they leave the screen. Jumping on an enemy stomps it.

Game Flow, HUD and Music

The score increases each time an enemy is stomped and is shown in the heads-up display. The game can be restarted without closing the application. Background music plays continuously across scenes.

Animation

The player and enemies have a floating animation. The animation speed adapts to movement speed.

The documentation walks you through every part of the game step by step. The required assets can be downloaded directly via the link in the Resources section.

ACCEPTANCE REQUIREMENTS

☐ All requirements from Task 01 are met and the game is playable.

☐ **Bonus:** All bonus requirements from Task 02 are met.

02 Bonus (+1 Point) ★

Double Jump

The player should be able to jump a second time while in the air. The double jump can only be used once and recharges when the player touches the ground.

Sound Effects

Add sound effects for jumping and for stomping an enemy.
